CONFERENCE PURPOSE AND DESCRIPTION

Trauma is the third leading cause of death in the United States and the leading cause of disability in young Americans. Advancements have made an impact on this challenging problem, but injury still remains the greatest silent epidemic of modern society. Our goal is to provide the most current information on trauma and its management to all health care professionals working to help combat this major health problem. Two concurrent sessions along with several general sessions are offered each day from which to choose.

OBJECTIVES

• Explore pre-hospital and early treatment strategies in trauma care
• Discuss advances to minimize or prevent complications in the trauma patient
• Describe emerging trends and treatment of the trauma patient
